Ürün Gruplarımız

Araçta direksiyondan verilen hareketi, rot başına ileterek, tekerleklerin düşey eksene göre dönmesini sağlayan bağlantı elemanlarıdır. Teknorot rot milleri, güvenli sürüş ve uzun ömürlü kullanım için uluslararası standartlara uygun malzemelerden ve tüm güvenlik test değerleri gözetilerek üretilmektedir.

Direksiyon simidi vasıtasıyla araca dönme hareketi kazandıran rot başları tamamıyla Teknorot 'un kendi tesislerinde üretilmekte olup, yurtiçi ve yurtdışı pazara büyük bir ürün çeşitliliğiyle sunulmaktadır.

Araçların süspansiyon sistemlerinin en önemli parçalarından biri de Z-Rotlardır. Aracın virajlı ve engebeli yollardaki dengesini korumada büyük rol oynarlar. Z-Rotlar, teker üzerine gelen fazla yükün diğer tekerlere iletilmesini sağladıkları için sürüş güvenliğini belirgin bir oranda artırırlar. Teknorot, sahip olduğu geniş ürün yelpazesi ve standartların üstünde kalite anlayışı sayesinde müşteri beklentilerini bu ürün grubunda da aşmayı başaramıştır.

Otomobilin ön düzeninde bulunan, her yöne dönebilen ve mafsalsız olarak kullanılan küre biçiminde bir parçadır. Teknorot rotilleri yüksek performans sergileyebilmeleri için uluslararası standartlara uygun malzemelerden üretilir ve müşterilerine bu güvenle sunulur.

Tekerlekleri düzgün konumda tutmakla beraber dışardan gelen kuvvetlere karşı hareketlerini sınırlayan ancak aşağı ve yukarı yöndeki hareketlere izin veren ön süspansiyon elemanları arasındaki en büyük ve kritik parçalardır. Ürün dayanım ve ömür testleri Teknorot 'un son teknoloji ile donatılmış kalite laboratuvarlarında büyük bir hassasiyetle yapılmaktadır. Birçok marka ve model için Teknorot üretimi rotilli salıncak ve rotilli kol ürünü mevcuttur.

Burçlar, motorlu araçlarda süspansiyon parçalarının araç şasisine bağlantı noktalarında, otomobilin sürüş sırasında maruz kaldığı titreşim ve gürültülerin minimuma indirilmesi için özel olarak dizayn edilmiş olan konfor ve aynı zamanda emniyet yapıları olarak ifade edilir. Genel olarak kauçuk ve metalden oluşurlar.

Inner Tie rods transmit lateral forces to the tie rod end and allow the wheels to turn accordingly. Teknorot inner tie rods are produced in accordance with all the international standards and safety tests in order to provide driving safety and increased durability.

Tie rod ends enables the rotation of the wheels by transitioning the commands from the steering wheel. Tie rod ends produced in Teknorot facilities are marketed to both local and international customers with a wide range of offerings.

Stabilizer Links (Sway Bars) are one of the most important parts of the suspension system. They have a key role to help reducing the body roll of a vehicle during fast cornering and rough road conditions. Stabilizer Links improve the driving safety by transmitting the extra weight on one wheel to the others. Teknorot has been able to exceed customer expectations with its wide range of products and above the standard quality it offers.

It's a spherical part located in steering and suspension system of a vehicle that can turn in every direction and used as a joint. In order to achieve high performance, Teknorot's ball joints are produced with components that match international standards and offered to clients with this assurance.

It is the largest and most critical parts of the front suspension elements that keep the wheels in position and limit their movement against forces from outside while allowing upwards and downwards movements. Product strength and life tests are carried out in our state of the art quality laboratories with great precision. We offer a wide range of Track Control Arms for many makes and models.

Bushings are safety and comfort components that connect suspension parts to chassis and designed uniquely to reduce vibration and noise when the vehicle is in motion. Generally they are made of rubber and metal. **kaufek**
