INNER TIE ROD AXIAL JOINT

Tie rod (Axial Joint / Inner Tie Rod) and Tie Rod End are steering parts that form the connection between steering rack and the wheels. They transmit lateral forces to the tie rod end and allow the wheels to turn accordingly. Tie Rods (inner and outer) are an essential parts of vehicle's steering system.Tie rods connect the steering gear to the wheel using a length of rod with a ball-in-socket on one end. The ball-in-socket mechanism allows the wheels to move up and down and side to side in a controlled movement. This enables a smooth ride as the vehicle navigates different types of road surfaces, bumps, potholes, etc.

TIE ROD END

It is a connecting element that enables the wheels to rotate with respect to the vertical axis by transmitting the motion given from the steering wheel to the rods. Teknorot Steering Tie Rods Ends are manufactured in accordance with international standards for safe driving and long life use, taking safety test values into consideration.

LINK STABILIZER

Stabilizer Link (Sway Bar) is a part of suspension system that helps reduce the body roll of a vehicle during fast cornering or over road irregularities. It helps connecting opposite (left/right) wheels together through short lever arms. Typically the Sway Bar link is mounted at the Sway Bar and at the Control Arm, but it could vary from vehicle to vehicle. There are several types of stabilizer bar links and Teknorot has the widest range in link stabilizers such as aluminum steel with rubber, polyurethane, and thermoplastic components.

BALL JOINT

Ball Joint is a component in suspension system of a vehicle that connects the chassis of the vehicle to the suspension system through a knuckle. The spherical ball stud and socket (housing) design of the joint enables it to turn every direction (multiple axis) as the wheels are steered and the road surface conditions change (bumps, potholes, etc.).

CONTROL ARMS & WISHBONES

It is the largest and most critical part of the front suspension elements that keeps the wheels in position and limits their movement against forces from the outside,but allows upwards and downwards movements.Product strength and life tests are carried out in our state of the art quality laboratories with great precision.We have Track Control Arms Assemblies for many brands and models.Control Arm or Wishbone is usually a flat and triangular sub-frame made of premium grade forged/cast/stamped steel or forged aluminum equipped with Bushings and Ball Joints allowing the part to flex and move according to road conditions and steering input from the driver. Connecting front axle and chassis of the vehicle,it allows the suspension to rotate as the car is cornering, resulting in convenient driving pleasure.
